

Question Bank No.I
Renewable Energy Sources

Periodic Test --I
Class:T.Y.Mech.

Q.No.1 Discuss world's production and reserves of different commercial Energy sources.

Q.No.2 Discuss India's production and reserves of different commercial energy sources.

Q.No.3.Draw a neat diagram of simple flat plate collector and describe the function of each part with working.

Q.No.4 What are advantages and disadvantages of flat plate collectors?

Q.No.5 List out the different factors and their effects on performance of a solar collector.

Q.No.6 What do you understand by concentration? Define and discuss the different terms which are important for design of concentrating collectors.

Q.No.7 Discuss various advantages and disadvantages of Concentrating Collectors.

Q.No.8 What do you mean by Evacuated Tube Collector (ETC)? Explain its working..

Q.No.9 Write a note on Direct flow Evacuated Tube Collector.

Q.No.10 Write a note on Heat Pipe Evacuated Tube Collector.

Q.No.11 what is a Parabolic Dish Concentrator.? Explain its working with necessary sketches.

Q.No.12 What are Parabolic Trough concentrators? Explain its working with neat sketch.

Q.No.13 What are Heliostats? How they work? Explain with neat sketch.

Q.No.14 Explain with neat sketch the functioning of Linear Fresnel Concentrators. Also discuss its applications.

Q.No.15 Suggest suitable material for the following with justification.

1. Absorber plate. 2. Cover. 3. Insulating materials 4.Material of tubes for liquid flow.

Q.No.16 Discuss all three types of Solar Tracking Systems in use.

Best luck
